Details

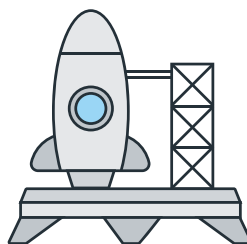

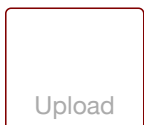

This is the first step for the replication and extension project.

By the end of the quarter you are supposed to finish the whole project.

- (i) top social science journal
- (ii) published post 2010, for which
- (iii) you can get the data the authors have used, and
- (iv) has unsupervised learning as a major component of the methodology of the paper.

You should submit the following:

1. Pick a paper that satisfies the above. If there is a need to relax one constraint, relax ii.
2. Get the data for the paper. **You should actually get the data before the deadline.** Not just "I checked; it is there".
3. Submit a short report that has the following elements (aim for 2 to 3 pages).
 - In a few sentences: what is the main argument/thesis of the paper.
 - Describe the data:
 - Where the data is coming from?
 - What is the size of the data? What does the data look like? be brief.
 - How is unsupervised learning used in the paper? What algorithm(s) are used?
